

PLASTIC LIDS

LIFE SPAN:

20 to 400 years

FAST FACTS:

Starbucks alone uses approximately four billion cups of coffee a year. That's billions of plastic lids winding up in landfills every year, averaging up to 11 million lids a day or 500,000 lids an hour.

After their one-time use, these lids will survive in the environment for hundreds of years, eventually breaking down into smaller and smaller pieces, entering our waterways and polluting our oceans.

THE SOLUTION

1. GO TOPLESS! REQUEST TO HAVE THE LID REMOVED.
2. REQUEST TO HAVE YOUR DRINK IN A MUG IF YOU'RE DRINKING YOUR COFFEE AT THE CAFE.
3. BRING YOUR OWN REUSABLE TUMBLER.
